# Jago Material

Make surfaces with character.

Create textured artwork, lettering and repeatable surfaces. Combine generated materials, scanned textures and your own marks, then export artwork or explicit surface channels.

## Your first few minutes

1. Choose a material example or import a scanned texture.
2. Add text or artwork, then choose foil, ink, emboss, deboss or raised lettering.
3. Compare finishes and adjust grain, light and mark treatment.
4. Save .jagomaterial; export artwork, .jagotexture or a channel kit.

Version 0.16.0 | Windows and offline browser edition

# What you can do

Jago Material 0.16.0

- Procedural wood, glass, metal and other editable material families.
- Imported/scanned image textures with independent repeat scale, rotation and offsets.
- Editable shapes, lettering, artwork masks, surface layers and lighting preview.
- Roughness/metallic controls and optional relief or explicit channel maps.
- Seeded Surprise me, texture library, tile inspection and motion exports.

## A useful way to work

Repeat: inspect and arrange repeatable textures.

Keep your editable project alongside finished exports. A rendered image, audio file or video preserves the result; the native project preserves the editing controls.

# In this update

## New tools and refinements

- Refined foil, emboss and deboss impressions with before/after comparison.
- Gold, silver, copper, rose-gold and platinum finish choices.
- Raised metal lettering from editable text, embedded fonts or rendered silhouettes.
- Compressed leather grain and separate surface-channel treatment.
- Eight editable finish/lettering examples plus additional starters.

## Keep exploring

Use the editable examples and in-app help to try another direction. Save a copy before experimenting with an important project.

The controls described here are included in this version. Optional local tools are identified in the practical details; they do not run continuously.

# Save, share & connect

## Files you can keep

- .jagomaterial projects and presets
- .jagotexture prepared surfaces
- PNG colour artwork, transparent selected layers and repeat sheets
- Timed PNG sequence ZIPs
- Surface-map ZIP: colour, height, roughness, metallic, normal, ORM and opacity

## Connected workflows

- Repeat: inspect and arrange repeatable textures.
- World: use a colour tile as a map surface.
- Wobble: bring in rendered animation or export timed frames.
- Library: organise texture kits and use finishes in layouts.

## Practical details

Raised lettering is rendered 2D artwork, not an exported 3D mesh.

Surface maps are artistic estimates, not measured scans; lighting is a preview.

ORM uses neutral occlusion; brightness relief is optional.

Channel kits capture time zero; check all channels when repairing a seam.

Opening: Extract the complete ZIP and open Jago-Material.exe, or Jago-Material.html in a current Edge/Chrome browser. Keep support folders together.
