Jago Material

Make surfaces with character.

Create textured artwork, lettering and repeatable surfaces. Combine generated materials, scanned textures and your own marks, then export artwork or explicit surface channels.

Your first few minutes

1. Choose a material example or import a scanned texture.
2. Add text or artwork, then choose foil, ink, emboss, deboss or raised lettering.
3. Compare finishes and adjust grain, light and mark treatment.
4. Save .jagomaterial; export artwork, .jagotexture or a channel kit.

Version 0.18.0 | Windows and offline browser edition

What you can do

Jago Material 0.18.0

- Procedural wood, glass, metal and other editable material families.
- Imported/scanned image textures with independent repeat scale, rotation and offsets.
- Editable shapes, lettering, artwork masks, surface layers and lighting preview.
- Roughness/metallic controls and optional relief or explicit channel maps.
- Seeded Surprise me, texture library, tile inspection and motion exports.

A useful way to work

Repeat: inspect and arrange repeatable textures.

Keep your editable project alongside finished exports. A rendered image, audio file or video preserves the result; the native project preserves the editing controls.

Working in the studio

Tools and workflows

- Use lit export when the light, foil or relief is part of the finished image. Use a Workshop material package to reuse the surface on a 3D object.
- Refined foil, emboss and deboss impressions with before/after comparison.
- Gold, silver, copper, rose-gold and platinum finish choices.
- Raised metal lettering from editable text, embedded fonts or rendered silhouettes.
- Compressed leather grain and separate surface-channel treatment.

Keep exploring

Use the editable examples and in-app help to try another direction. Save a copy before experimenting with an important project.

The controls described here are included in this version. Optional local tools are identified in the practical details; they do not run continuously.

Save, share & connect

Files you can keep

- .jagomaterial projects and presets
- .jagotexture prepared surfaces
- PNG colour artwork, transparent selected layers and repeat sheets
- Timed PNG sequence ZIPs
- Surface-map ZIP: colour, height, roughness, metallic, normal, ORM and opacity

Connected workflows

- Repeat: inspect and arrange repeatable textures.
- World: use a colour tile as a map surface.
- Wobble: bring in rendered animation or export timed frames.
- Library: organise texture kits and use finishes in layouts.

Practical details

Raised lettering is rendered 2D artwork, not an exported 3D mesh.

Surface maps are artistic estimates, not measured scans; lighting is a preview.

ORM uses neutral occlusion; brightness relief is optional.

Channel kits capture time zero; check all channels when repairing a seam.

Opening: Extract the complete ZIP and open Jago-Material.exe, or Jago-Material.html in a current Edge/Chrome browser. Keep support folders together.
